

Problem

How can we streamline and scale the screening interview process?

Solution

An AI-powered interviewing system that runs interviews in parallel, scores candidate fit in real time, and auto-generates HR reports

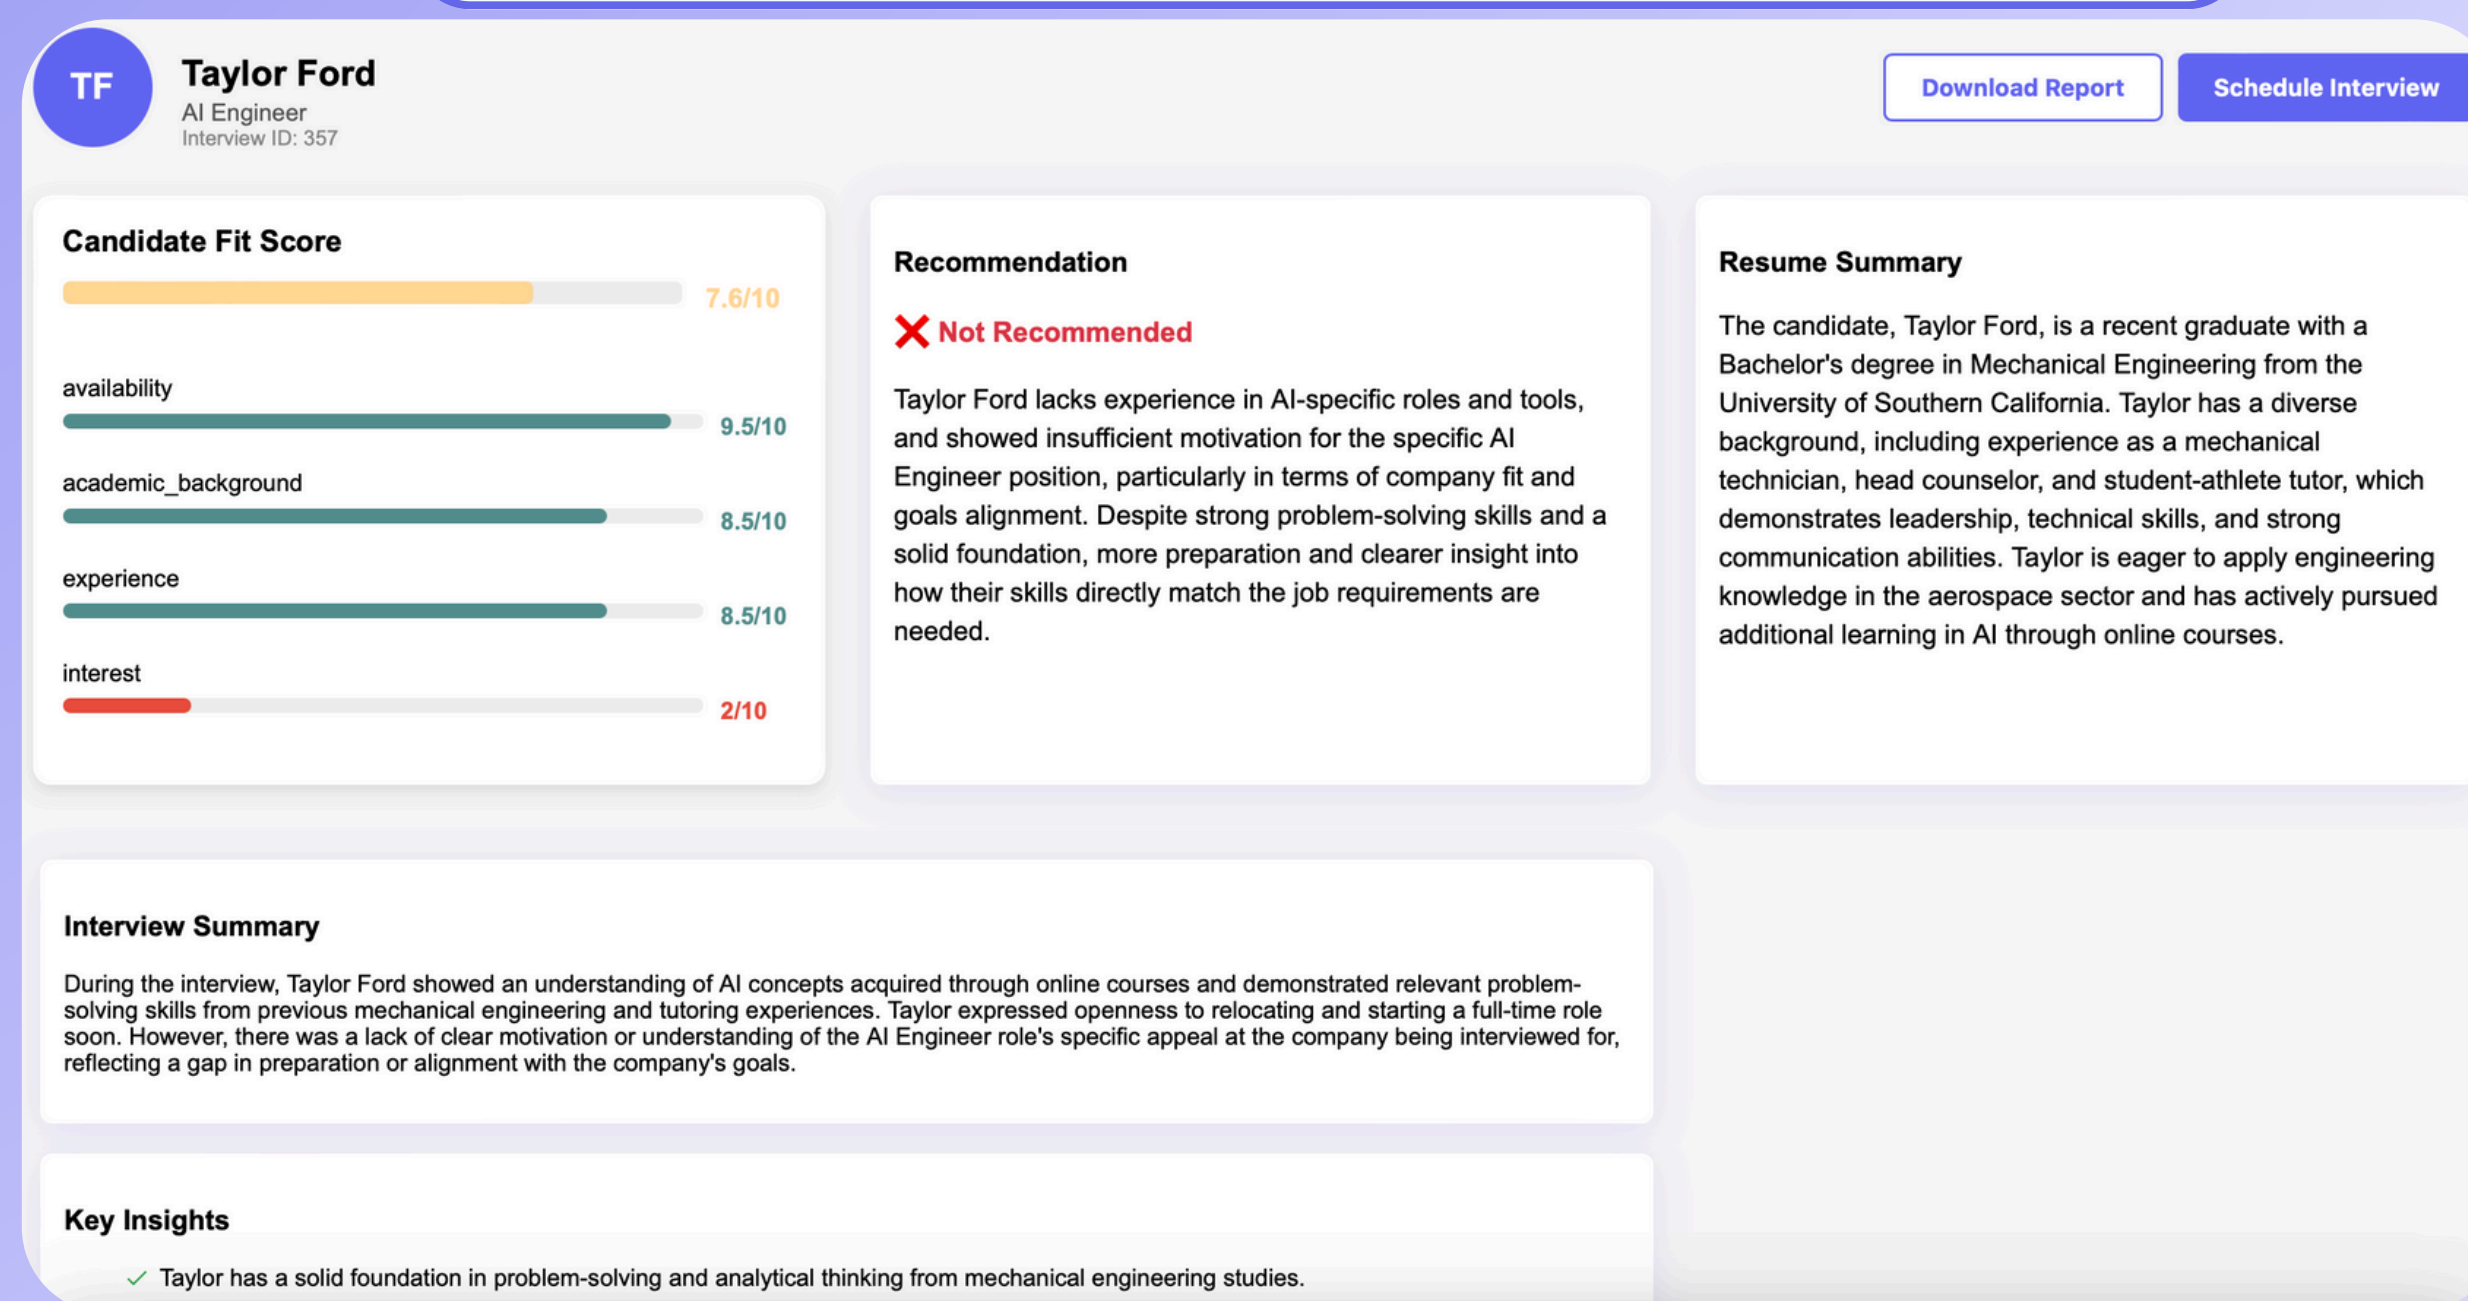

Project Goals

Build a zoom AI interviewer chatbot powered by GPT-4o that will address core interview topics such as location, experience, and role fit

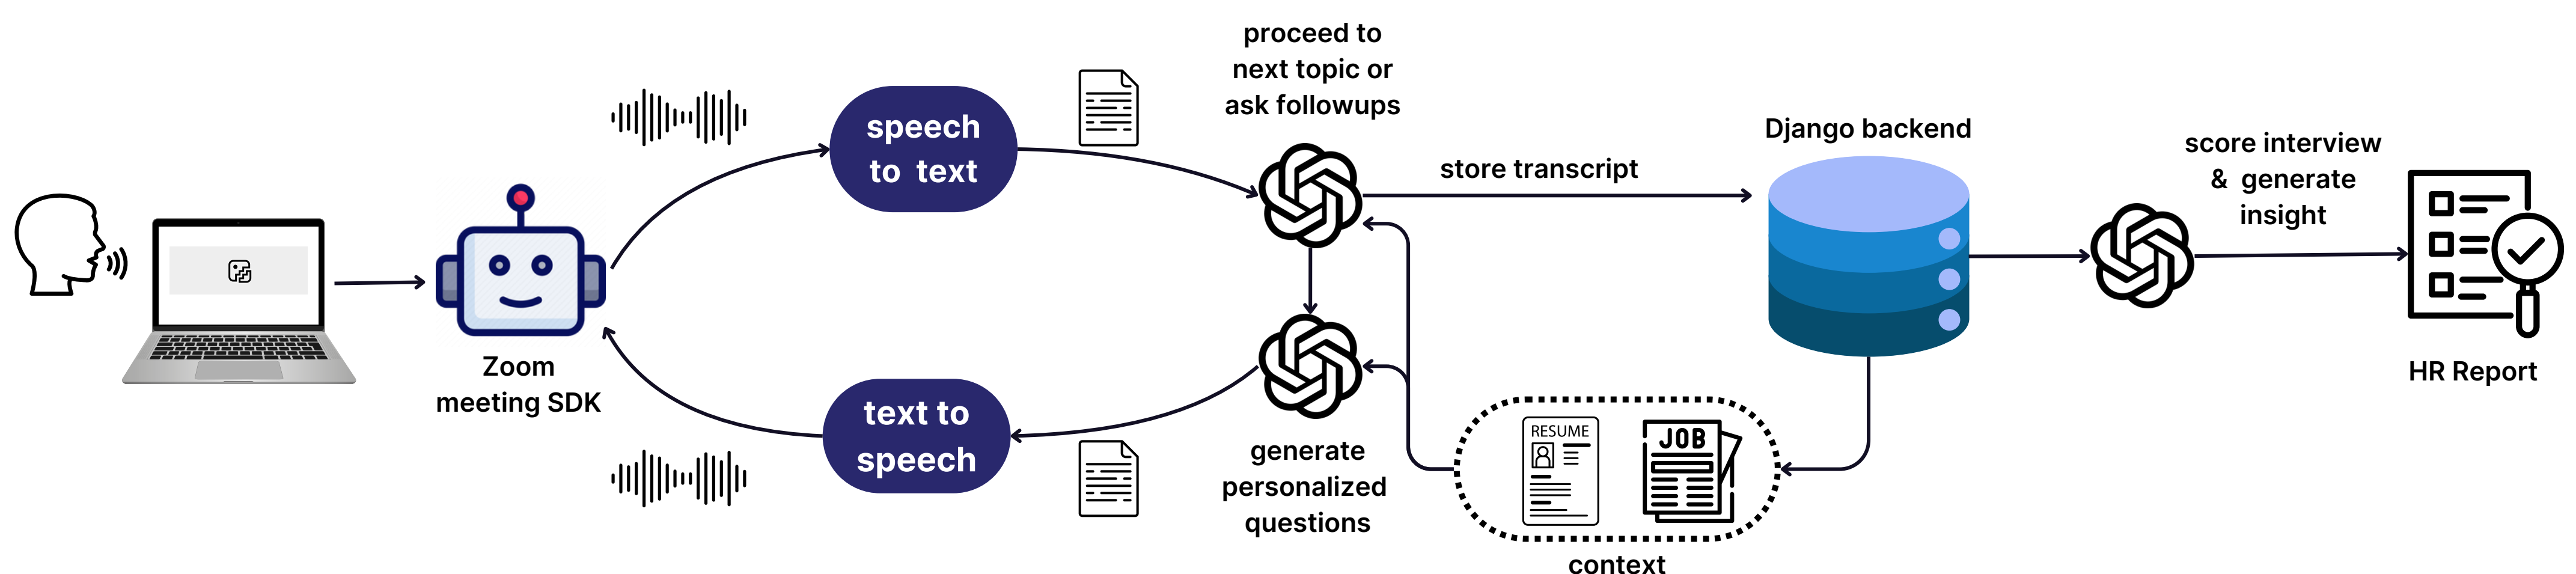

Tech Stack

User Interaction & Design

System Architecture

Challenges

- Minimizing latency across STT, LLM, and TTS within a real-time Zoom bot integration
- Designing a system capable of generating personalized screening questions in real time
- Managing containerization of the interview workflow with Docker to support scalable deployment
- integrating the Zoom bot with Calendly API for scheduled Interview Sessions.

Future Work

- Explore open-source LLM's as alternatives to OpenAI for more flexibility and control
- Explore fine tuning an open-source LLM on interview data
- Deploy and integrate our AI interviewer within Pairwise's platform
- Enhance usability and scalability for enterprise level use
